

G1 — Self-Help Guide: Getting started with the NHS App

Reepham & Aylsham
Medical Practice PPG

Working together
for our patients

Now that you are happy you have internet access, your own email address, access to that email account, and a mobile phone that can receive text messages, you are ready to begin.

1

1. Open the NHS App

Download the NHS App to a smartphone or tablet, or use your account through a web browser.

2

2. Create your NHS account

Enter your email address, create a password and provide your mobile number. Follow the email and text-message instructions to confirm your details.

3

3. Connect to your GP records

Enter your personal details exactly as they are held by your GP practice. The NHS service will use these details to connect your account to your GP-held records.

4

4. Verify your identity — choose one route

Smartphone or tablet

Use suitable photo ID and complete the face scan or short video shown on screen.

Without submitting
photo ID

Use your GP online-services registration details:

- Account ID
- Practice ODS Code
- Linkage Key or Passphrase.

Contact the Practice if you need these details. You can enter them through the NHS App or a web browser.

5

5. Sign in and check your services

Once verified, sign in and check what is available. This may include ordering repeat prescriptions, viewing records or test results, managing appointments and receiving messages.

Use the relevant **G4 task guide** for help with a particular service.

Need help?

Use **G2 — Support Guide**

Check that your details match those held by the Practice and that you can access your email and text messages. Do not share your password or security codes. If you cannot complete the process yourself, use the G2 — Support Guide.

This guide is produced by Reepham & Aylsham Medical Practice PPG and is for information only. It does not replace NHS or professional medical advice.
